Breakthrough Technologies

OFF

ON

FHI

An innovative technology that using different transmission and receiving methods for different body sized patients, to maximize the resolution without losing the penetration.

Better than traditional THI and phased harmonic which compromise the penetration.

OFF

ON

AIO

- Optimize the distorted 2D image by pressing just one key.
- Automatically adjust the baseline by pressing just one key in PW and CW mode.

- Greatly reduce your time spending on the image adjustment, allow you to focus more on your patients.

Advanced Tool for Optimized Healthcare

4D

Depth View

Virtual HD

Wide angle TV probe

- Up to 210° extremely wide angle
- Provide more diagnose information
- Save time, improve the efficiency

Smart Volume Slice

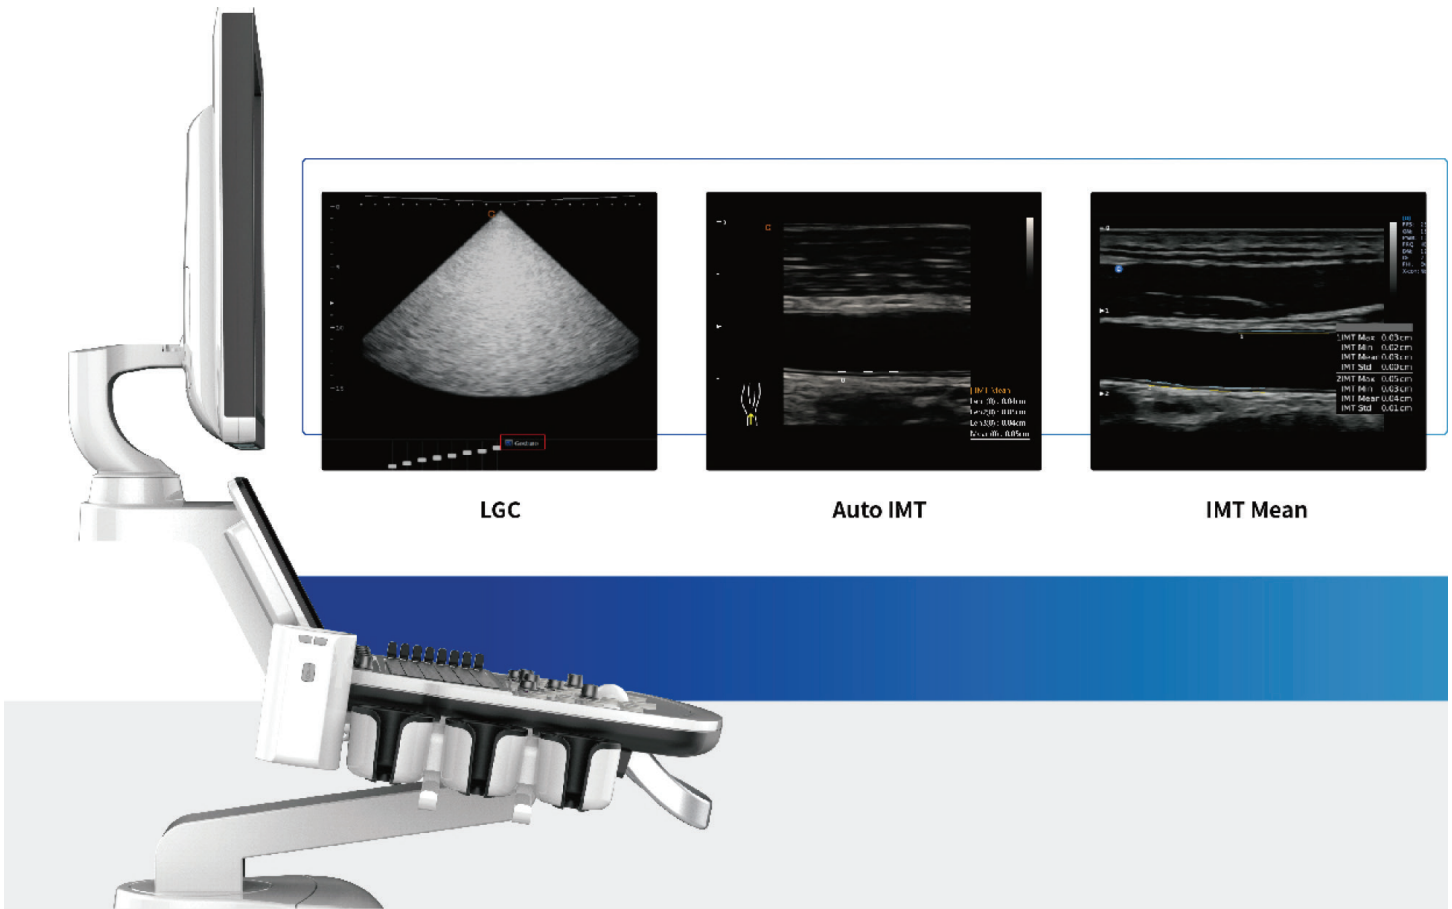

- Cut the 3D volume to different slice observe it thoroughly in tomographic view
- Specialized for deep diagnosis, such as inside clef lip

HDNiche

- Showing three orthogonal plane images (sagittal, axial, coronal view) in 3-dimensional space.
- As user can observe sagittal, axial and coronal view of a target object by moving the three orthogonal plane's crossing point, it helps user to better understand the internal shape and structure of the target object.

LGC

Auto IMT

IMT Mean

Smart HIP

- Use a graph for hip orthotics diagnosis, help the doctor to give a more easier and more accurate diagnosis during the pediatric hip scanning
- Different angle indicate different level of hip deformity, which is more easier and obvious to see with the aid of the graph. (I, II, D, IIIa, IIIb)

HD CZoom

- Zoom the color information, remain the high resolution
- Important for the small vessel blood information detection, especially for the fetal heart diagnose

Virtual Convex

- Enlarge the scan area in convex probe, same as convex trapezoid
- Better for the big organ display, especially liver, kidney through the rib space
